AGENCY: Corps of Engineers, Army Department, DOD.

ACTION: Final rule.

SUMMARY: We are hereby issuing final regulations for the regulatory program of the Corps of Engineers. These regulations consolidate earlier final, interim final, and certain proposed regulations along with numerous changes resulting from the consideration of the public comments received. The major changes include modifications that provide for more efficient and effective management of the decision-making processes, clarifications and modifications of the enforcement procedures, modifications to the nationwide permit program, revision of the permit form, and implementation of special procedures for artificial reefs as required by the National Fishing Enhancement Act of 1984.

FOR FURTHER INFORMATION CONTACT: Mr. Sam Collinson or Mr. Bernie Goode, HQDA (DAEN-CWO-N), Washington, DC 20314-1000, (202) 272-0199.

*** EXCERPTS OF ALL SECTIONS ADDRESSING THE SCOPE OF “WATERS OF THE UNITED STATES”***

Part 323--Permits for Discharges of Dredged or Fill Material Into Waters of the United States

33 CFR § 323.2

Section 323.2: Several commenters supported moving the definitions relating to waters of the United States to a separate paragraph. As proposed on May 12, 1983, we have moved the term "waters of the United States" and all other terms related to the geographic scope of jurisdiction of Section 404 of the CWA to 33 CFR Part 328 which is titled "Definition of the Waters of the United States." We believe that, by setting these definitions apart in a separate and distinct Part of the regulation and including in that Part all of the definitions of terms associated with the
scope of the Section 404 permit program, we are better able to clarify the scope of our jurisdiction. We have not changed any existing definitions nor added any definitions proposed on May 12, 1983. Comments related to these definitions are addressed in Part 328 below.

****

Part 328--Definition of Waters of the United States

This part is being added in order to clarify the scope of the Section 404 permit program. This part was added in direct response to many concerns expressed by both the public and the Presidential Task Force on Regulatory Relief. We have not made changes to existing definitions; however, we have provided clarification by simply setting *41217 them apart in a separate and distinct Part 328 of the regulation.

The format for Part 328 has been changed slightly from the proposed regulation in order to improve clarity and reduce duplication. The content of the proposed § 328.2 "General Definitions" has been partially combined with § 328.3 "Definitions." The remainder has been reestablished as § 328.5, "Changes in Limits of Waters of the United States." Section 328.2 has been established as "General Scope." The proposed §§ 328.4 and 328.5 have been combined into § 328.4 and renamed "Limits of Jurisdiction."

A number of commenters appeared to have misinterpreted the intent of this part. Many thought we were trying to reduce the scope of jurisdiction while others believed we were trying to expand the scope of jurisdiction. Neither is the case. The purpose was to clarify the scope of the 404 program by defining the terms in accordance with the way the program is presently being conducted.

Section 328.3: Definitions. This section incorporates the definitions previously found in § 323.3 (a), (c), (d), (f) and (g). Paragraphs (c), (d), (f) and (g) were incorporated without change. EPA has clarified that waters of the United States at 40 CFR 328.3(a)(3) also include the following waters:

a. Which are or would be used as habitat by birds protected by Migratory Bird Treaties; or

b. Which are or would be used as habitat by other migratory birds which cross state lines; or

c. Which are or would be used as habitat for endangered species; or

d. Used to irrigate crops sold in interstate commerce.

For clarification it should be noted that we generally do not consider the following waters to be "Waters of the United States." However, the Corps reserves the right on a case-by-case basis to determine that a particular waterbody within these categories of waters is a water of the United States. EPA also has the right to determine on a case-by-case basis if any of these waters are "waters of the United States."
States."

(a) Non-tidal drainage and irrigation ditches excavated on dry land.

(b) Artificially irrigated areas which would revert to upland if the irrigation ceased.

(c) Artificial lakes or ponds created by excavating and/or diking dry land to collect and retain water and which are used exclusively for such purposes as stock watering, irrigation, settling basins, or rice growing.

(d) Artificial reflecting or swimming pools or other small ornamental bodies of water created by excavating and/or diking dry land to retain water for primarily aesthetic reasons.

(e) Waterfilled depressions created in dry land incidental to construction activity and pits excavated in dry land for the purpose of obtaining fill, sand, or gravel unless and until the construction or excavation operation is abandoned and the resulting body of water meets the definition of waters of the United States (see 33 CFR 328.3(a)).

The term "navigable waters of the United States" has not been added to this section since it is defined in Part 329.

A number of comments were received concerning the proposed change to the definition of the terms "adjacent" and the proposed definitions for the terms "inundation", "saturated", "prevalence", and "typically adapted." A number of commenters believed that these terms may better define the scope of jurisdiction of the section 404 program, but such definitions should more rightfully be within the province of the Environmental Protection Agency in order to remain consistent with the opinion of Benjamin Civiletti, Attorney General (September 5, 1979). These definitions would require the prior approval of the Environmental Protection Agency, which has not been forthcoming. Therefore, these new proposed definitions will not be adopted at this time.

To respond to requests for clarification, we have added a definition for "tidal waters." The definition is consistent with the way the Corps has traditionally interpreted the term.

Section 328.4: Limits of Jurisdiction. Section 328.4(c)(1) defines the lateral limit of jurisdiction in non-tidal waters as the ordinary high water mark provided the jurisdiction is not extended by the presence of wetlands. Therefore, it should be concluded that in the absence of wetlands the upstream limit of Corps jurisdiction also stops when the ordinary high water mark is no longer perceptible.

Section 328.5: Changes in Limits of Waters of the United States. This section was changed to reflect both natural and man-made changes to the limits of waters of the United States. This change was made for clarification and resulted from consultation with the Environmental Protection Agency.
Section 328.6: Supplemental Clarification. Most commenters favored the Corps plans to give special consideration to unique areas such as Arctic Tundra that do not easily fit the generic" wetlands definition. Several commenters indicated that the Corps should clarify its intended use of this section, and one questioned the need to "describe" unique areas in the Federal Register. A number of commenters indicated that criteria should be specified for determining wetland types to be included as unique areas. Some commenters stated that close coordination between the Corps and the Environmental Protection Agency will be necessary when selecting unique areas and developing procedures for making wetland determinations in such areas, since the Environmental Protection Agency has the final authority to determine the scope of "Waters of the United States."

While we believe that supplemental clarification of unique areas will be a positive step in clarifying the scope of jurisdiction under the section 404 permit program, we have determined that such supplemental clarification can be done under existing regulations of the Environmental Protection Agency and the Corps and therefore have deleted this section.

***

Accordingly, the Department of the Army is revising 33 CFR Parts 320, 321, 322, 323, 324, 325, 326, 327, 329, and 330 and adding Part 328 to read as follows:

***

33 CFR § 328.1

§ 328.1 Purpose.

This section defines the term "waters of the United States" as it applies to the jurisdictional limits of the authority of the Corps of Engineers under the Clean Water Act. It prescribes the policy, practice, and procedures to be used in determining the extent of jurisdiction of the Corps of Engineers concerning "waters of the United States." The terminology used by section 404 of the Clean Water Act includes "navigable waters" which is defined at section 502(7) of the Act as "waters of the United States including the territorial seas." To provide clarity and to avoid confusion with other Corps of Engineer regulatory programs, the term "waters of the United States" is used throughout 33 CFR Parts 320-330. This section does not apply to authorities under the Rivers and Harbors Act of 1899 except that some of the same waters may be regulated under both statutes (see 33 CFR Parts 322 and 329).

33 CFR § 328.2

§ 328.2 General scope.

Waters of the United States include those waters listed in § 328.3(a). The lateral limits of jurisdiction in those waters may be divided into three categories.
The categories include the territorial seas, tidal waters, and non-tidal waters (see 33 CFR 328.4 (a), (b), and (c), respectively).

**33 CFR § 328.3**

§ 328.3 Definitions.

For the purpose of this regulation these terms are defined as follows:

(a) The term "waters of the United States" means

(1) All waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;

(2) All interstate waters including interstate wetlands;

(3) All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce including any such waters:

(i) Which are or could be used by interstate or foreign travelers for recreational or other purposes; or

(ii) From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or

(iii) Which are used or could be used for industrial purpose by industries in interstate commerce;

(4) All impoundments of waters otherwise defined as waters of the United States under the definition;

(5) Tributaries of waters identified in paragraphs (a) (1)-(4) of this section;

(6) The territorial seas;

(7) Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (a) (1)-(6) of this section.

Waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA (other than cooling ponds as defined in 40 CFR 123.11(m) which also meet the criteria of this definition) are not waters of the United States.

*41251* (b) The term "wetlands" means those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps,
marshes, bogs, and similar areas.

(c) The term "adjacent" means bordering, contiguous, or neighboring. Wetlands separated from other waters of the United States by man-made dikes or barriers, natural river berms, beach dunes and the like are "adjacent wetlands."

(d) The term "high tide line" means the line of intersection of the land with the water's surface at the maximum height reached by a rising tide. The high tide line may be determined, in the absence of actual data, by a line of oil or scum along shore objects, a more or less continuous deposit of fine shell or debris on the foreshore or berm, other physical markings or characteristics, vegetation lines, tidal gages, or other suitable means that delineate the general height reached by a rising tide. The line encompasses spring high tides and other high tides that occur with periodic frequency but does not include storm surges in which there is a departure from the normal or predicted reach of the tide due to the piling up of water against a coast by strong winds such as those accompanying a hurricane or other intense storm.

(e) The term "ordinary high water mark" means that line on the shore established by the fluctuations of water and indicated by physical characteristics such as clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas.

(f) The term "tidal waters" means those waters that rise and fall in a predictable and measurable rhythm or cycle due to the gravitational pulls of the moon and sun. Tidal waters end where the rise and fall of the water surface can no longer be practically measured in a predictable rhythm due to masking by hydrologic, wind, or other effects.

33 CFR § 328.4

§ 328.4 Limits of jurisdiction.

(a) Territorial Seas. The limit of jurisdiction in the territorial seas is measured from the baseline in a seaward direction a distance of three nautical miles. (See 33 CFR 329.12)

(b) Tidal Waters of the United States. The landward limits of jurisdiction in tidal waters:

(1) Extends to the high tide line, or

(2) When adjacent non-tidal waters of the United States are present, the jurisdiction extends to the limits identified in paragraph (c) of this section.

(c) Non-Tidal Waters of the United States. The limits of jurisdiction in non-tidal waters:

(1) In the absence of adjacent wetlands, the jurisdiction extends to the ordinary
(2) When adjacent wetlands are present, the jurisdiction extends beyond the ordinary high water mark to the limit of the adjacent wetlands.

(3) When the water of the United States consists only of wetlands the jurisdiction extends to the limit of the wetland.

§ 328.5 Changes in limits of waters of the United States.

Permanent changes of the shoreline configuration result in similar alterations of the boundaries of waters of the United States. Gradual changes which are due to natural causes and are perceptible only over some period of time constitute changes in the bed of a waterway which also change the boundaries of the waters of the United States. For example, changing sea levels or subsidence of land may cause some areas to become waters of the United States while siltation or a change in drainage may remove an area from waters of the United States. Man-made changes may affect the limits of waters of the United States; however, permanent changes should not be presumed until the particular circumstances have been examined and verified by the district engineer. Verification of changes to the lateral limits of jurisdiction may be obtained from the district engineer.
